

Plain Old Asthma

Are you glad
You have RAD and not something bad?

When your child runs out to play
do you think of EIA?

Would you rather have ROAD
than asthma as the mode?

Did your doctor finally discover
that you have asthma under cover?
(Cold Induced Asthma)

When you avoid the name of A
do your problems go away?

If the doctor says wheezy bronchitis
will the symptoms then delight us?

The word bronchitis may ease your mind
but one night you'll be in a bind.

You will wake up from your sleep
with a wheeze and a cough that is deep.

If you don't know about asthma
And lack medicine to treat it

All those nice-sounding words
Will leave you defeated.

Now here's a rhyme to save the day
Face the facts: you have POA
(Plain Old Asthma).

Plain old asthma can be controlled.
You can do it once you've been told.
